Select curricular and program design

- 2012 - . UWM Student Startup Challenge
Developed along with Dr. Ilya Avdeev (Mechanical Engineering) and UWM Research Foundation President Brian Thompson, this interdisciplinary competition and program aims to stimulate and nurture student design-, technology- or socially-based entrepreneurship through the fostering of innovation, commercialization and economic growth. Around 10 ideas are chosen from a large pool of applicants every year, and teams are given faculty and student resources, mentors, a prototype development team, budgets for research, development, and business expenses, and another team for work on a business model canvas - which may include IP, meetings with investors, and more. Funding for this program has come from various university, state, federal, and private grants and gifts. Winning teams have members from Mechanical Engineering, Art and Design, Inter-Arts, Architecture, Computer Science, Information Studies, and Political Science, among other departments.
- 2010 - . Digital Studio Practice, Department of Art and Design, Peck School of the Arts
120 credit studio program centers on the study and use of digital technologies in direct relation to more traditional art forms. All DSP students take courses in video, interactive and electronic media, and choose a cross-disciplinary focus in order to combine these techniques with another of Art and Design's areas: Ceramics, Fibers, Design & Visual Communication, Metals, Painting, Photography, Printmaking or Sculpture. They incorporate audiovisual and computer strategies into more established art materials, in order to create new forms. Program development included two new labs and continuous equipment purchases.
2009. Interdisciplinary Arts and Technology, Inter-Arts Program (Art, Dance, Film, Music), Peck School of the Arts
Developed in collaboration with faculty across the Peck School, the 120 credit, studio-based Interdisciplinary Arts and Technology program (IAT or Arts/Tech) focuses on interdisciplinary art-making at a crossroads where technology meets visual and time-based media, sound and movement. Students combine software, hardware and programming with physical materials, digital media and the performing arts. They explore contemporary artistic practices across courses in the Art and Design, Music, Dance, and Film departments. Program development included two new labs and continuous equipment purchases, and a one-night exhibition, Arts and Technology Night, at the end of every semester.
2002. Interactive Digital Media, Digital Arts MAFA, Wits School of the Arts, University of the Witwatersrand
Developed in collaboration with Christo Doherty (Head of Digital Arts) and Nicole Ridgway (Performance Studies), the Interactive Digital Media program focuses on interactive digital media and creative practice. The program is designed for students from an arts and design background who wish to engage with the creative possibilities of interactive digital media technologies, and for students from engineering, science and technology backgrounds who wish to develop their creativity in

these areas. The aim of the Masters Program is to bring together passionate individuals from diverse creative and technology/science backgrounds to creatively explore and develop new and exciting interactive media.

Select course development and teaching

2014. Art 107 Entrepreneurship Experience Course, Undergrad, 3 Credits
Developed alongside colleagues in Design and Visual Communication, Engineering, Business, and the UWM Research Foundation, this course provides an opportunity for freshmen and sophomores students across UWM to acquire and experience entrepreneurial and innovative thinking skills. Co-taught Fall 2014 with 17 students, as an overload.
2013. INTLST-550: Senior Seminar in International Studies: Affect, Art, & Politics
This course provides a basic overview of affect theory and its articulation, activation, mediation and utilities of manipulation in the realms of art and politics on an international scale. Beginning with a basic understanding of sensation and potential, and how they might be used to shape, for example, (South African) national sentiment and thus policy, the course will continue by exploring how our unintentional, affective responses to the outside can and do influence our sexuality, identity, media, economic policy, everyday activities, memories and more.
2013. Art 906 Creative Writing / Writing for Creation, Grad, 3 Credits
In this workshop participants are introduced to writing as a key component of visual arts practice and praxis. It is premised on the understanding that writing is a mode of thinking and feeling; that writing is fundamental to research creation; and, that writing is an essential part of the material, conceptual and professional practice of artists today. Art and writing have the potential to transform, create, and mobilize one another. UW-Milwaukee: developed and taught in 2013, 6 students.
2012. Art 904 Graduate Seminar in Art - Unique Topics: Affect and Contemporary Art, Grad, 3 Credits
This course explores affect and sensation as they are articulated, activated and mediated by and with the arts. It surveys some of the key philosophies and theories surrounding affect, or "thinking-feeling," as they relate to, for example, time, movement, space, identity, performance, matter, and the recent turn to the non-human. We critically discuss and analyze the finer points of how affect is introduced to us via the arts, or is co-opted by consumer-capitalist strategies, through studies of modern and contemporary work. UW-Milwaukee: developed and taught in 2012, 8 students.
- 2010 - . Art 212. Introduction to Digital Studio Practice Undergrad, 3 credits
This introductory course covers the understanding of digital and time-based images for art and design production. It is a prerequisite to the Digital Studio Practice (DSP) concentration in Art and Design and a studio elective course for all Art and Design students. Students focus on understanding how digital images "work," as both data and physical form, as ARGB matrices and additive light in space. They learn basic digital camera and video hardware, as well as the software technologies used to produce and edit them. Concepts of mathematical formulae, absence and presence of light and shadow, and performativity and generativity are discussed at length. UW-Milwaukee: developed individually, taught every semester by graduate students and other faculty, with a maximum of 25 students.
- 2008 - . Art 405. Product Realization. Undergrad/Grad, 3 credits
Students learn innovative approaches and design processes for developing new and real-world products with multi-disciplinary teams. They are given budgets from local companies, and study strategies for optimizing multiple phases of the product realization process. These include: requirements definition, concept generation, concept selection, prototype generation, design for manufacturing, testing and market penetration, and the communications of their ideas and prototypes through presentations and printed materials. Artists, designers and engineers across all disciplines are taken through each phase of a nonlinear process to produce a working prototype and final prospectus by the end of the semester. UW-Milwaukee: re-developed in collaboration with Chancellor Mike Lovell, taught every semester with Lovell or Dr. Ilya Avdeev (Mechanical Engineering), approximately 40 students.
- Art 312. Video and Audio Strategies for Artists & Designers. Undergrad/Grad, 3 credits
In this intensive production class, students produce 4 video art projects, each with distinct strategies and access points for creative engagement: narrative (storyboarding prior to picking up the camera), investigative (formalistic and performative approaches to video with the camera), experimental (generative, temporal, digital and montage strategies, in editing), and installation (spatialization of video through screens and projections). UW-Milwaukee: re-developed individually, taught every semester on rotation with other faculty, with a maximum of 20 students.
- Art 316. Interactive and Multimedia Art. Undergrad/Grad, 3 credits
Students produce art objects and installations that ask us to inter-act with video cameras for body- and motion-tracking, microphones for amplitude tracking, and/or MIDI and USB devices to control digital elements. This class has no pre-requisites and is open to both graduate and undergraduate students. UW-Milwaukee: developed individually, taught annually on rotation with other faculty, with a maximum of 20 students.
- Art 315. Participatory Art and Social Practice. Undergrad/Grad, 3 credits
In this production class, students study and produce relational works, eco-installations, and/or participatory art. Following in-depth readings, in-class discussions and excursions out and about the city, they collaboratively propose and make three

thematic pieces in the public sphere, at least one of which will be displayed as part of a conference or exhibition at the close of the semester. UW-Milwaukee: developed individually, taught annually on rotation with other faculty, with a maximum of 20 students.

Art 318. Electronics and Sculpture. Undergrad/Grad, 3 credits

Students produce art objects and installations that incorporate microcontrollers in order to utilize analog sensors - such as photocells, flex and tilt sensors, sonars, potentiometers and more - as well as motors and kinetics. In addition to learning about extant projects in the field, they practice basic electronics, simple programming, and communications between multimedia computers, microcontrollers, and many of the peripheries available for each. This class has no pre-requisites and is open to both graduate and undergraduate students.
